ART UNIT PAPER NUMBER

2629

DATE MAILED: 03/23/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/478,799

Applicant(s)

HAYAMA ET AL.

Examiner

Amare Mengistu

Art Unit

2629

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on Dec.5,2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-17 and 20-25 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 1-17,20 and 21 is/are allowed.
- 6) ☒ Claim(s) 22-25 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 22-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rowe (U.S. Patent 5,479,190) in view of Siddiqui (U.S. 5,912,661).

AS to claims 22-25, Rowe teaches an input device having a multi-wheel structure (the same as polygonal wheel) discloses a plurality of rotating bodies (fig.13 (152)); a polygon like wheel structure 150 comprises a plurality of rotating bodies 154 surrounding a circumferential band defined by a continuous band 152_(see figure 13 at 152, 154) which rotates about a center, a wheel 160 which is rotatable along a first axis comprising a plurality of rotating bodies 154 that are disposed along the wheel 160 and rotating with a circumferential edge of said wheel about a first axis and the plurality of rotating bodies rotatable about a second axis (see figure 13 at 160, 154, column 8, lines 55 through column 9, lines 14).The circumferential edge is further defined by a continuous band 152, which acts as a support for the grooved elements 154 (column 8, lines 55-60, figure 13 at 152, 154).

Art Unit: 2629

Furthermore, Rowe teaches how each of the rotating bodies have an interior thereof with raised portions and recessed portions with the wheel having projections (see figure 13, 14 at 154, 160). Also, Rowe teaches how the rotating bodies (154, 160), tacitly communicate by disclosing a position control device comprising: a plurality of grooved segments each presenting a longitudinal void there through, an annular band for supporting said segments and holding said segments in adjacent annular array to permit a user to apply a rotational force on at least one of said segments to accomplish rotational movement of said segment for communication of said rotational force to a detector and to permit a user to apply a lateral force to at least one of said segments to accomplish lateral movement of said segment for communication of said lateral force to a detector, means for detecting lateral movement of at least one of said segments, means for detecting rotational movement of at least one of said segments, and means responsive to said detected segment movement for generating a signal to effect repositioning of a symbol on a graphic display device (column 10, lines 22-41).

Also, Rowe teaches a detector (30) that is responsive to the indicia (26) in order to generate a signal which maybe processed and communicated to the cursor or pointing device to achieve movement of the cursor (see column 5, lines 2-23, figure 1 at 30).

However, Rowe does not teach a processing unit to detect and to output at least one of a rotating state of the polygonal wheel and a respective one of the rotating bodies, which is being rotated.

On the other hand, *Siddiqui* teaches a mouse (12) having a rotating wheel button (22) with an optical encoding wheel (44), and axle (30) which had left and right

Art Unit: 2629

bearing surfaces (36, 38) which are all mounted along the circumference of the wheel (column 3, lines 3-8, figure 2 at 12, 22, 30, 36, 38 & 44), and a light detector (48) which serve as a detection means by sensing the motion of the optical encoder which is along the surface of the wheel (22), and then providing a positioning signal (see Abstract; see also column 3, lines 43-51, figure 2 at 12, 44 & 48; column 4, 33-40, "figure 7).

Thus, it would have been obvious for a person of ordinary skill in the art to combine *Rowe* and *Siddiqui's* inventions because while *Rowe* teaches a wheel 160 which is rotatable along a first axis comprising a plurality of rotating bodies 154 that are disposed along the wheel 160 and rotating with a circumferential edge of said wheel about a first axis and the plurality of rotating bodies rotatable about a second axis (see figure 13 at 160, 154, column 8, lines 55 through column 9, lines 14) wherein the circumferential edge is further defined by a continuous band 152, which acts as a support for the grooved elements 154 (column 8, lines 55-60, figure 13 at 152, 154), *Siddiqui* teaches a wheel rotating detection means by teaching a rotating wheel button (22) with an optical encoding wheel (44), and axle (30) which has left and right bearing surfaces (36, 38) which are all mounted along the circumference of the wheel (column 3, lines 3-8, figure 2 at 12, 22, 30, 36, 38 & 44), and a light detector (48) which serves as a detection means by sensing the motion of the optical encoder which is along the surface of the wheel (22), and then providing a positioning signal . The motivation for combining these inventions would have been to provide a more efficient tactile and aural feedback to a user of this input device when a user depresses the input device or rotates the wheel (column I, lines 60-63).

Furthermore, Siddiqui teaches a format change-over switch and a data transmission means by teaching left and right click buttons (18, 20) with their respective left and right microswitches (54, 56) and how they are manipulated with the wheel to operate the input device (column 4, lines 11-20, figure 7 at 18, 20, 54 & 56) with a third switch in the form of a switch engager (50) which depresses the switch button (51) of a microswitch (52) when the wheel button (22) is depressed (column 4, lines 11-20, figure 7 at 22, & 50-52). Also, Siddiqui teaches a detecting means for the third switch by teaching that microswitch (52) is mounted on a circuit board (28), along with left and right microswitches (54, 56) that are activated by left and right mouse buttons (column 4, lines 11-20, figure 7 at 28, 52, 54 & 56). This provides a detection means for detecting the operating state of the switches and also enables the mouse buttons (18, 20) to provide tactile and aural feedback to a user who depresses the wheel (22) (column 4, lines 11-20, figure 7 at 18, 20 & 22).

Allowable Subject Matter

3. Claims 1-21 are allowed.

Response to Arguments

4. Applicant's arguments with respect to claims 1-21 have been considered but are moot in view of indicating the allowance of these claims.

The Applicant argues that Rowe does not rotate and move in a fixed position. The claim never recites, "Rotate and move". Applicant also argues that Rowe does not teach or suggest that grooved segments 154 rotate along with band 152 or that the

Art Unit: 2629

band 152 rotates. Here note that 154 moves M direction and 152 moves in the R direction.

The applicant asserts that Rowe does not teach that a polygonal wheel having plural sides to rotate in a first direction, each of the rotating bodies being rotationally attached to a corresponding one of the plural sides to rotate in a second direction. Rowe clearly teaches that a polygonal wheel having plural sides to rotate in a first direction (fig.13 (150) rotates in a first direction M), each of the rotating bodies being rotationally attached to a corresponding one of the plural sides to rotate in a second direction (fig.13 (152) rotates in a second direction R).

Furthermore, Rowe also teaches that the polygonal wheel having a rotating bodies (152) thereon rotating in a direction perpendicular to a wheel rotation direction (M) for multi-axial coordinate input.

The Examiner believes that the cited references read on the claimed limitations.

Conclusion

5. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 2629

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Amare Mengistu whose telephone number is (571) 272-7674. The examiner can normally be reached on M-F,T-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sumati Lefkowitz can be reached on (571) 272-3639. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
